ADDENDUM 3 – Clarification Only

Date: June 22, 2018

Reference: RFP # 2018-001, VOIP Telephone System

Last Date for Questions to be received from Proposers: 1:00 pm Friday, June 22, 2018

Proposal Due: No later than 1:00 pm Friday, July 6, 2018

Question Posed: In the RFP you mentioned a fiber connection coming into your facility but a speedtest showing only 3-4 (MBPS) Upload and 30-40 (MBPS) Download. Is this a true fiber optic connection or is this a coax connection? To clarify, HD voice codecs run about 85kbps. If this is indeed your only connection which is being used for other internet traffic as well, will MEOC be open to having a dedicated circuit installed for voice.

Response: Section I.C.3 of the RFP Specifies a Cisco SG 300-10, which has no Coaxial connections. It is Fiber. The speed is a matter of how much maximum speed we currently pay for from the ISP. We currently have four connections of that Fiber box in use with the primary ISP. One is the primary internet gateway for all three buildings. One is the failover. One is for video conferencing. One is for Guest Wi-Fi. In addition, we have Comcast Wi-Fi into the PACE building providing Guest Wi-Fi and Comcast TV service into the Transit building. In the event a dedicated circuit were needed, we would likely have no objections, depending upon all the details that would be discussed with the Primary Proposer, after selection.

All other requirements remain unchanged.

Please acknowledge receipt and acceptance of this addendum by completing the section below and returning the addendum with your proposal. Signature on this addendum does not substitute for your signature on the original bid document. The original bid document must be signed.
